

JANUARY 1962

EDITOR B. COOK

BUFFALO ASTRONOMICAL ASSOCIATION, INC.

ASSOCIATION MEETS JAN. 13

The first meeting of the new year will be held on Friday, January 13th at 7:30 P.M. in room 302 at the Buffalo Museum of Science. A number of interesting talks has been arranged.

Paul Redding will report on "Seeing" (turbulence in the atmosphere).

Albert Hubert will give a talk on the Solar System which will be illustrated with photographs.

Ron Clippinger will again entertain us with some astronomical anecdotes.

Thomas Peltz will tell us about the constellation of the month, Canis Major.

ELEMENTARY STUDY GROUP

The Elementary Study Group will change its meeting day from Saturdays to Sundays. It is hoped that this change will make it easier for a greater number of people to attend the meetings. Group members will be notified of exact time and place.

It will be June in January on the 22nd for amateur astronomers who will be watching the moon, not for romance, but for the occultation of Regulus and Uranus.

ADVANCED STUDY GROUP

The Advanced Study Group will hold its January meeting at the Science Museum on Saturday, January 20th at 2:00 instead of the usual 1:30 P.M. At the December meeting four members took home books which will be discussed on following weeks. The subjects of the symposiums will be: the sun, between the planets, the origin of the stars, and the interaction of astronomy and philosophy.

Weather conditions permitting, the members will be able to make observation of the sun through the museum's 8" telescope, with the possibility of using the new monochromator for observing solar prominences.

OBSERVATORY COMMITTEE

The committee reports that during the winter months there will be no work going on at the observatory. This means, of course that there will be no one at the site to show visitors around.
