" SPECIAL NOTICE"

ELECTIONS TO BE HELD AT SEPTEMBER MEETING At the June meeting of the B.A.A. it was announced that the election of officers for the coming year would be postponed until December. However upon further consideration at a meeting of the Board of Directors ,held on August 5th it was decided to continue the practice of holding the annual election of officers in June.

This will mean that as in the past the newly elected officers will have to work diligently thru the summer to plan the programs for the coming year. You will remember that the main reason for proposing the change of election date was to avoid ~~the situation~~ this situation. Further consideration however made it evident that by changing the date of election of officers from June to December only substituted one problem for another, thus presenting the Board of Directors with a dilemma.

The new problem created by changing the election date would be that the newly elected officers, unless they were all incumbents would be responsible for carrying out programs for the next calendar year that they may have had no part in planning.

This was considered to be the more undesirable of the dilemma and therefore the Board of Directors decided to reinstate the previous practice of June elections. In accordance with this decision the election of officers for 1964-65 will be held at the Sept. Meeting to be held at the Museum of Science on Friday, Sept. 11 beginning at 8:00 P.M.

---

Also on tap for this month will be a short talk by Paul Redding on "Seeing" In this talk he will define just what the astronomer means by the term and will describe the many factors that contribute to the state of seeing at the time that telescopic observations are being made.

Refreshments and observing will follow the meeting.
